◆ EDUCATION

BMS College of Engineering (BMSCE)

Bengaluru, India

Bachelor of Engineering, Computer Science Engineering | Expected Graduation: 2029 | Currently: 1st Year, 2nd Semester
SGPA: 9.4 (Semester 1)

Relevant Coursework: Structured Programming in C, Quantum Physics and Computation for CSE, Introduction to AI and Applications, Introduction to Python Programming

Orchids The International School

Class 12, CBSE — 90.2%

Baldwin Co-Education Extension High School

Class 10, ICSE — 96.6%

◆ RESEARCH INTERESTS

Seeking summer research opportunities at IISc Bangalore, prioritizing work that is both scientifically interesting and practically useful. Primary interest in Scientific AI — applying machine learning to weather prediction, climate modelling, scientific simulations, and healthcare — with a broader interest in Medical AI / Computer Vision and quantum mechanics as it applies to computation.

◆ TECHNICAL EXPERIENCE

SheCodes Hackathon, BMSCE

3RD PLACE / FINALIST

- Built a financial wellness dashboard (team of 3) at a hackathon centered on women's empowerment through technology, featuring personalized insights, spending analytics, budgeting assistance, and goal tracking through data visualization.

Independent Project Development

Ongoing

- Designed and shipped three self-directed projects (NexDiary, NexNest, AR Angry Birds) across web, PWA, and Unity/AR platforms, each taken from concept to working build.

◆ PROJECTS

NexDiary — Private Photo & Audio Journal

Offline-First Web App

- Built a private, installable journaling app that works offline and stores all data on the user's device, with no cloud backend required.
- Designed key features including combined photo/audio entries, a PIN-protected private vault, a "Time Capsule" to unlock entries at a future date, and PDF export of journal entries.

NexNest — Family Chore & Reward Tracker

Gamified Web App

- Designed and built a household app with separate dashboards for parents and kids to manage chores and rewards.
- Implemented a points, streaks, and badge system with a sibling leaderboard to motivate kids, plus PIN-protected controls for parents.

AR Angry Birds — Augmented Reality Mobile Game

Unity | Team of 3

- Collaborated with a team of 3 to build an AR mobile game in Unity where players place a virtual platform and blocks onto a real surface using their phone camera, then launch projectiles to destroy structures.
- Designed core gameplay mechanics including multiple block materials with varying durability, a build/play mode toggle, and physics-based destruction.
- Directed AI-assisted development to implement gameplay logic, gaining hands-on experience with AR and game design concepts.

◆ TECHNICAL SKILLS

Programming Languages: C, Python, HTML

Developer Tools & Platforms: GitHub, VS Code, Firebase, Netlify

Other: Unity (AR development), AI-assisted development workflows, Windows

◆ ACHIEVEMENTS & CERTIFICATIONS

- 3rd Place / Finalist, SheCodes Hackathon, BMSCE — Financial Wellness Platform (team of 3)
- CodeSprint — Peer-to-Peer Web Development Sessions, Google Developer Groups (GDG) BMSCE, March 2026

◆ LEADERSHIP & EXTRACURRICULAR

- Volunteer, Art of Living (member since 2017; actively volunteering since 2022)
- Member, Rotaract Club (2025–present)
- Member, Awaara Running Club (2025–present)
- Interests: Meditation, yoga, running, trekking, non-fiction reading
