

Rakshith N

1st Year BE, BMS College of Engineering (BMSCE)

Bengaluru, Karnataka, India | 8197947185 | nrakshith32@gmail.com | linkedin.com/in/rakshith-n-437435403 | github.com/nrakshith32-web

◆ PROFESSIONAL SUMMARY

First-year Computer Science Engineering student (SGPA 9.4, Semester 1; 9.35, Semester 2) with a strong foundation in programming fundamentals and a genuine interest in AI/ML, software development, and applied research. Builds real, working projects independently and under time constraints — from InternLoom AI, an AI-powered resume-screening engine built solo at a hackathon, to an offline-first journaling app and an AR mobile game — and placed 3rd at the SheCodes Hackathon (BMSCE) as part of a team. Actively pursuing summer research opportunities in machine learning, computational physics, and medical AI/computer vision.

◆ EDUCATION

BMS College of Engineering (BMSCE) — 1st Year BE

Bachelor of Engineering, Computer Science Engineering

Expected Graduation: 2029 | Currently: 1st Year, 2nd Semester

Relevant Coursework: Structured Programming in C, Quantum Physics and Computation for CSE, Introduction to AI and Applications, Introduction to Python Programming

Bengaluru, India

SGPA: 9.35 (Semester 2)

SGPA: 9.4 (Semester 1)

Orchids The International School — Class 12, CBSE

90.2%

Baldwin Co-Education Extension High School — Class 10, ICSE

96.6%

◆ RESEARCH INTERESTS

Seeking summer research opportunities at IISc Bangalore, prioritizing work that is both scientifically interesting and practically useful. Primary interest in Scientific AI — applying machine learning to weather prediction, climate modeling, scientific simulations, and healthcare — with a broader interest in Medical AI / Computer Vision and quantum mechanics as it applies to computation.

◆ TECHNICAL SKILLS

Programming Languages: C, Python, HTML

Developer Tools & Platforms: GitHub, VS Code, Firebase, Netlify, Streamlit

Libraries & Data Processing: PyMuPDF, NLP (rule-based extraction), Data Processing

Other: Unity (AR development), AI-assisted development workflows, Microsoft Excel, Windows

◆ PROJECTS

InternLoom AI — AI-Powered Resume Shortlisting Engine *Python | Streamlit | NLP | PyMuPDF | Data Processing*

- Built a solo, AI-assisted resume screening system under a hackathon time constraint that parses PDF resumes, extracts structured candidate information, matches skills against job descriptions, and generates explainable candidate scores.
- Designed a modular pipeline covering resume parsing, information extraction, skill matching, scoring, and reporting, with an interactive Streamlit interface for uploading resumes and job requirements.

NexDiary — Private Photo & Audio Journal *Offline-First Web App*

- Built a private, installable journaling app that works offline and stores all data on the user's device, with no cloud backend required.
- Designed key features including combined photo/audio entries, a PIN-protected private vault, a "Time Capsule" to unlock entries at a future date, and PDF export of journal entries.

NexNest — Family Chore & Reward Tracker *Gamified Web App*

- Designed and built a household app with separate dashboards for parents and kids to manage chores and rewards.
- Implemented a points, streaks, and badge system with a sibling leaderboard to motivate kids, plus PIN-protected controls for parents.

AR Angry Birds — Augmented Reality Mobile Game *Unity | Team of 3*

- Collaborated with a team of 3 to build an AR mobile game in Unity where players place a virtual platform and blocks onto a real surface using their phone camera, then launch projectiles to destroy structures.
- Designed core gameplay mechanics including multiple block materials with varying durability, a build/play mode toggle, and physics-based destruction.
- Directed AI-assisted development to implement gameplay logic, gaining hands-on experience with AR and game design concepts.

◆ TECHNICAL EXPERIENCE

SheCodes Hackathon, BMSCE

3RD PLACE / FINALIST

- Built a financial wellness dashboard (team of 3) at a hackathon centered on women's empowerment through technology, featuring personalized insights, spending analytics, budgeting assistance, and goal tracking through data visualization.

InternLoom AI — Hackathon Project

SOLO

- Independently designed and built an AI-assisted resume screening platform under hackathon time constraints, covering resume parsing, candidate information extraction, job-requirement matching, and explainable candidate scoring.

Independent Project Development

Ongoing

- Designed and shipped four self-directed projects (InternLoom AI, NexDiary, NexNest, AR Angry Birds) across web, PWA, and Unity/AR platforms, each taken from concept to working build.

◆ ACHIEVEMENTS & CERTIFICATIONS

- 3rd Place / Finalist, SheCodes Hackathon, BMSCE — Financial Wellness Platform (team of 3)
- CodeSprint — Peer-to-Peer Web Development Sessions, Google Developer Groups (GDG) BMSCE, March 2026

◆ LEADERSHIP & EXTRACURRICULAR

- Volunteer, Art of Living (member since 2017; actively volunteering since 2022)
- Member, Rotaract Club (2025–present)
- Member, Awaara Running Club (2025–present)
- Interests: Meditation, yoga, running, trekking, non-fiction reading

◆ REFERENCES

Dr. Chandan

Assistant Professor

Department of Physics, B.M.S. College of Engineering (BMSCE), Bengaluru

Ph.D., Bangalore University (in collaboration with the Indian Institute of Science – IISc); specializes in Experimental Nanophysics, Condensed Matter Physics, and Photonics.
